

DURABESTOS is a tough, rock-like building material, composed of asbestos fibre and Portland cement. It is available in big, broad Sheets, of two thicknesses.

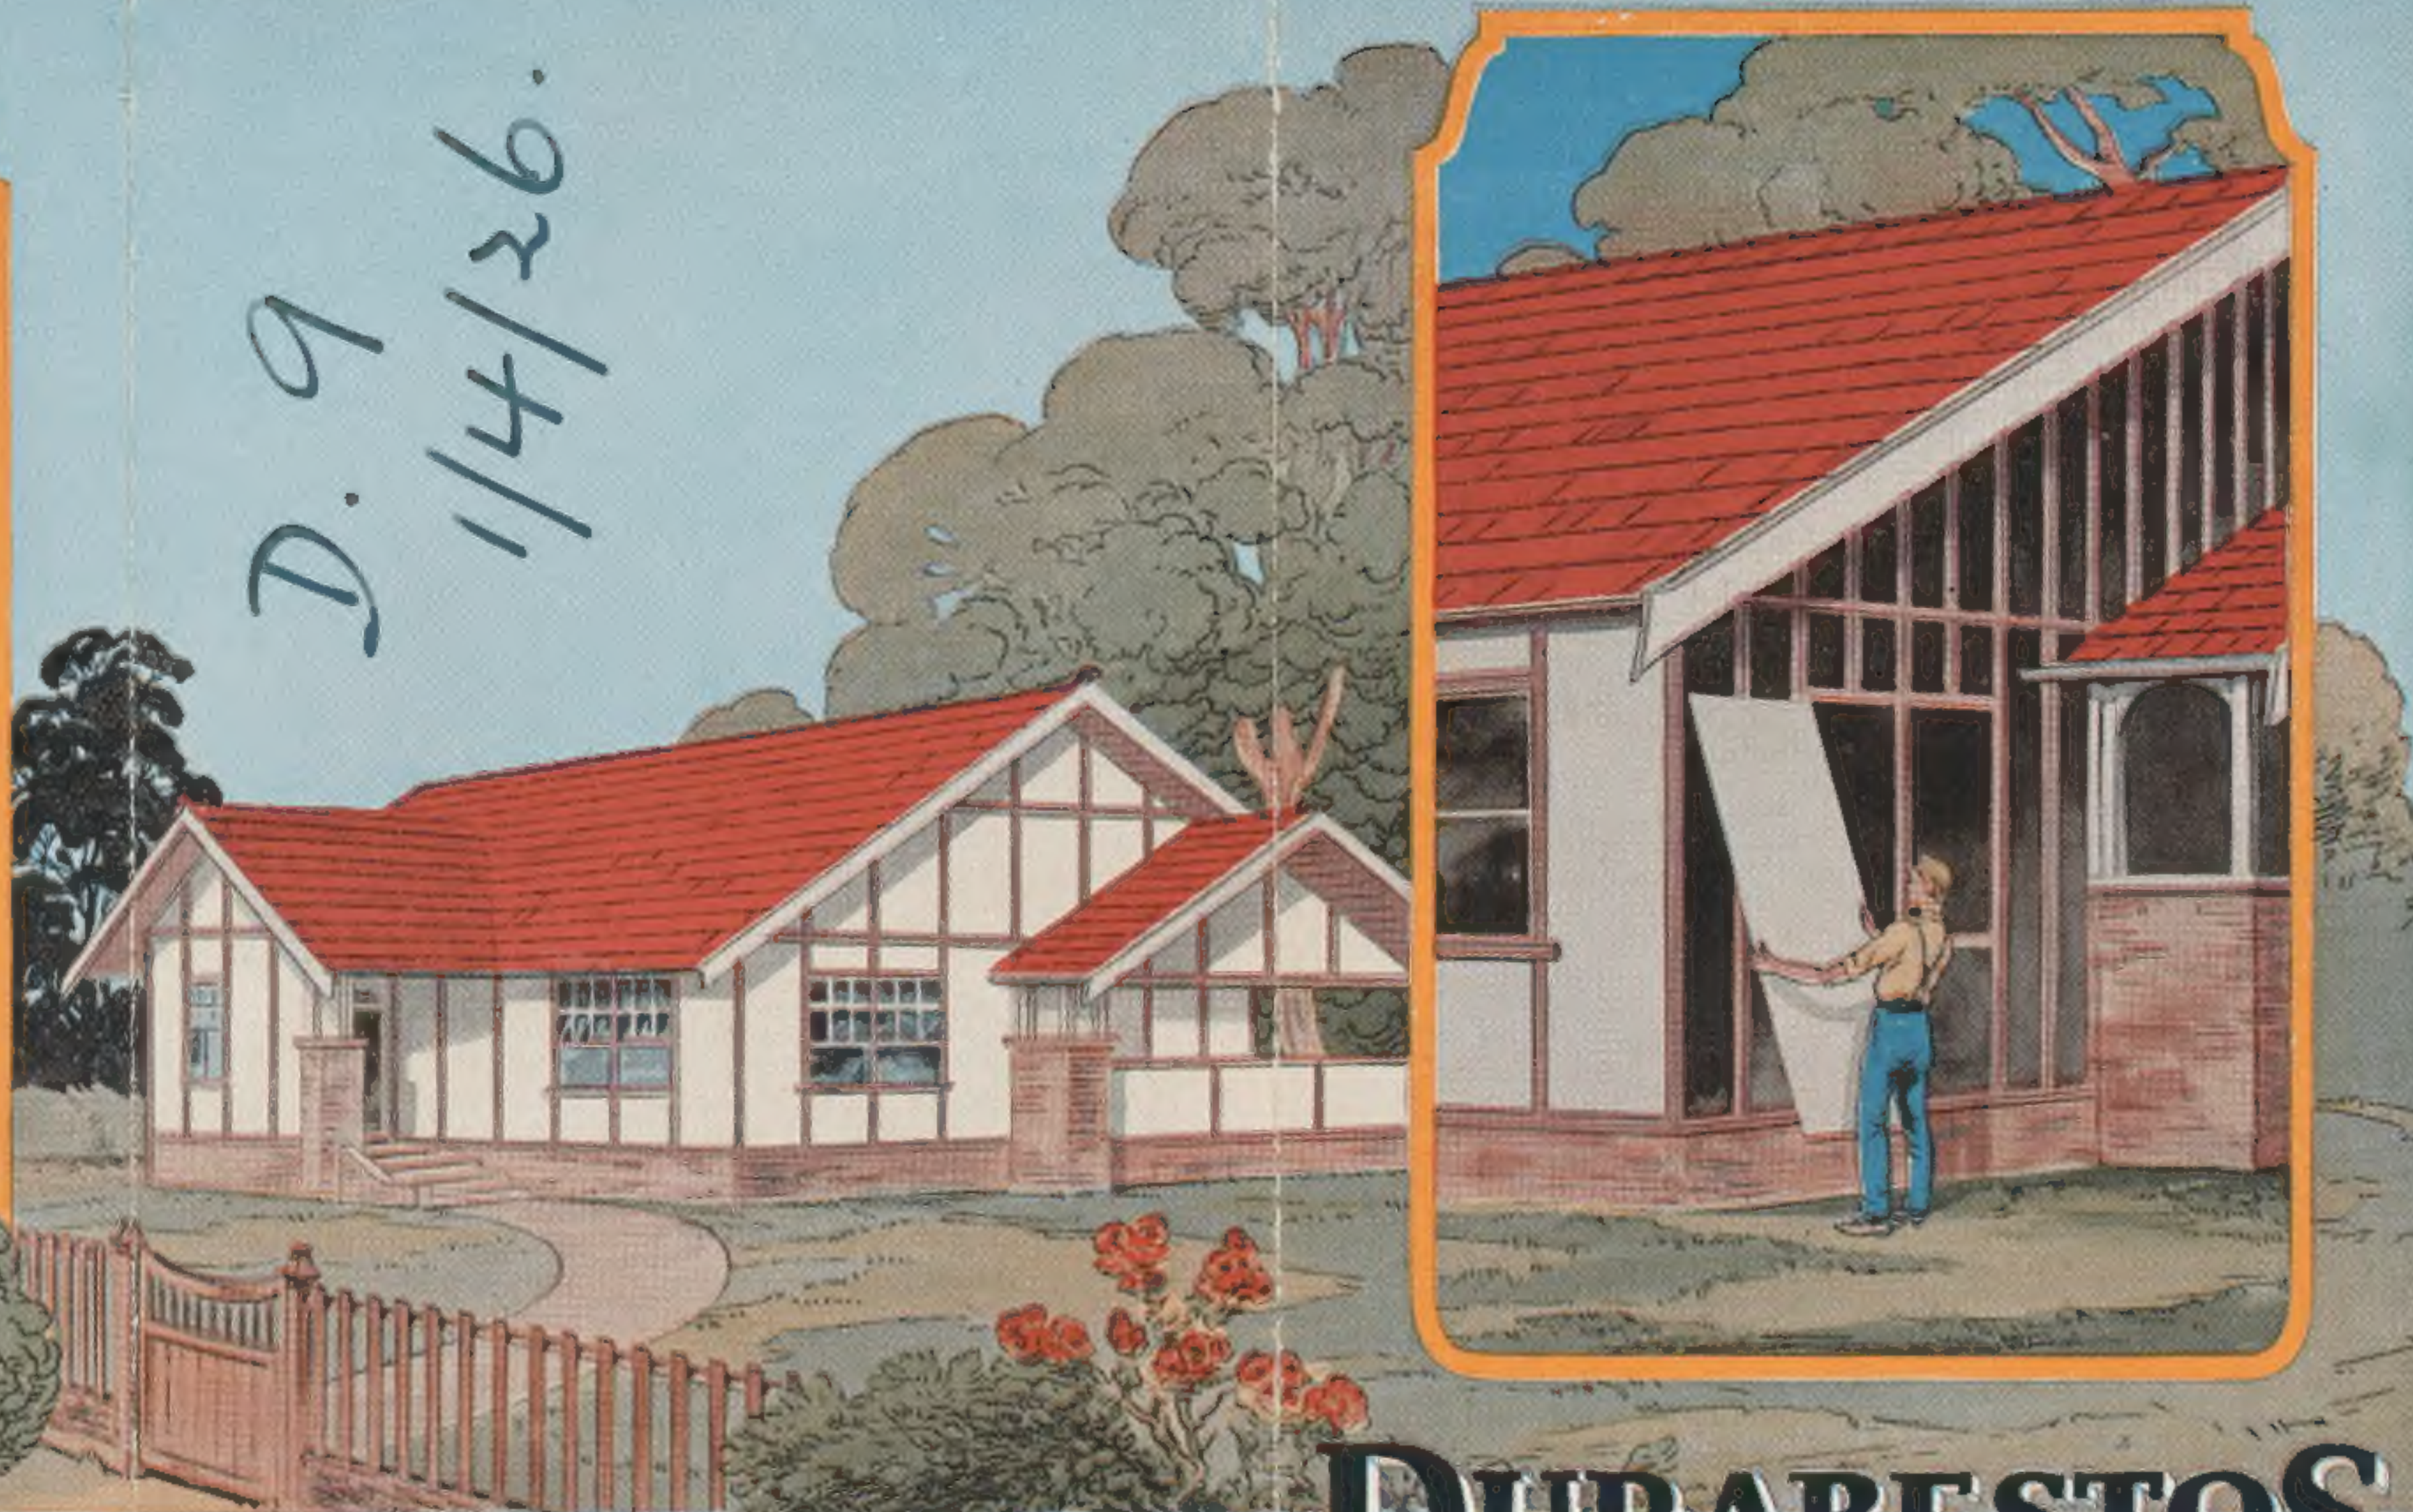

Durabestos Sheets, approximately 3-16ths of an inch thick, are used for Exterior and Interior Walls.

For Ceiling purposes, we manufacture Sheets of an approximate thickness of 5-32nds of an inch.

Stock sizes available in each thickness range from 4ft. to 10ft. long, by widths of 3ft. and 4ft.

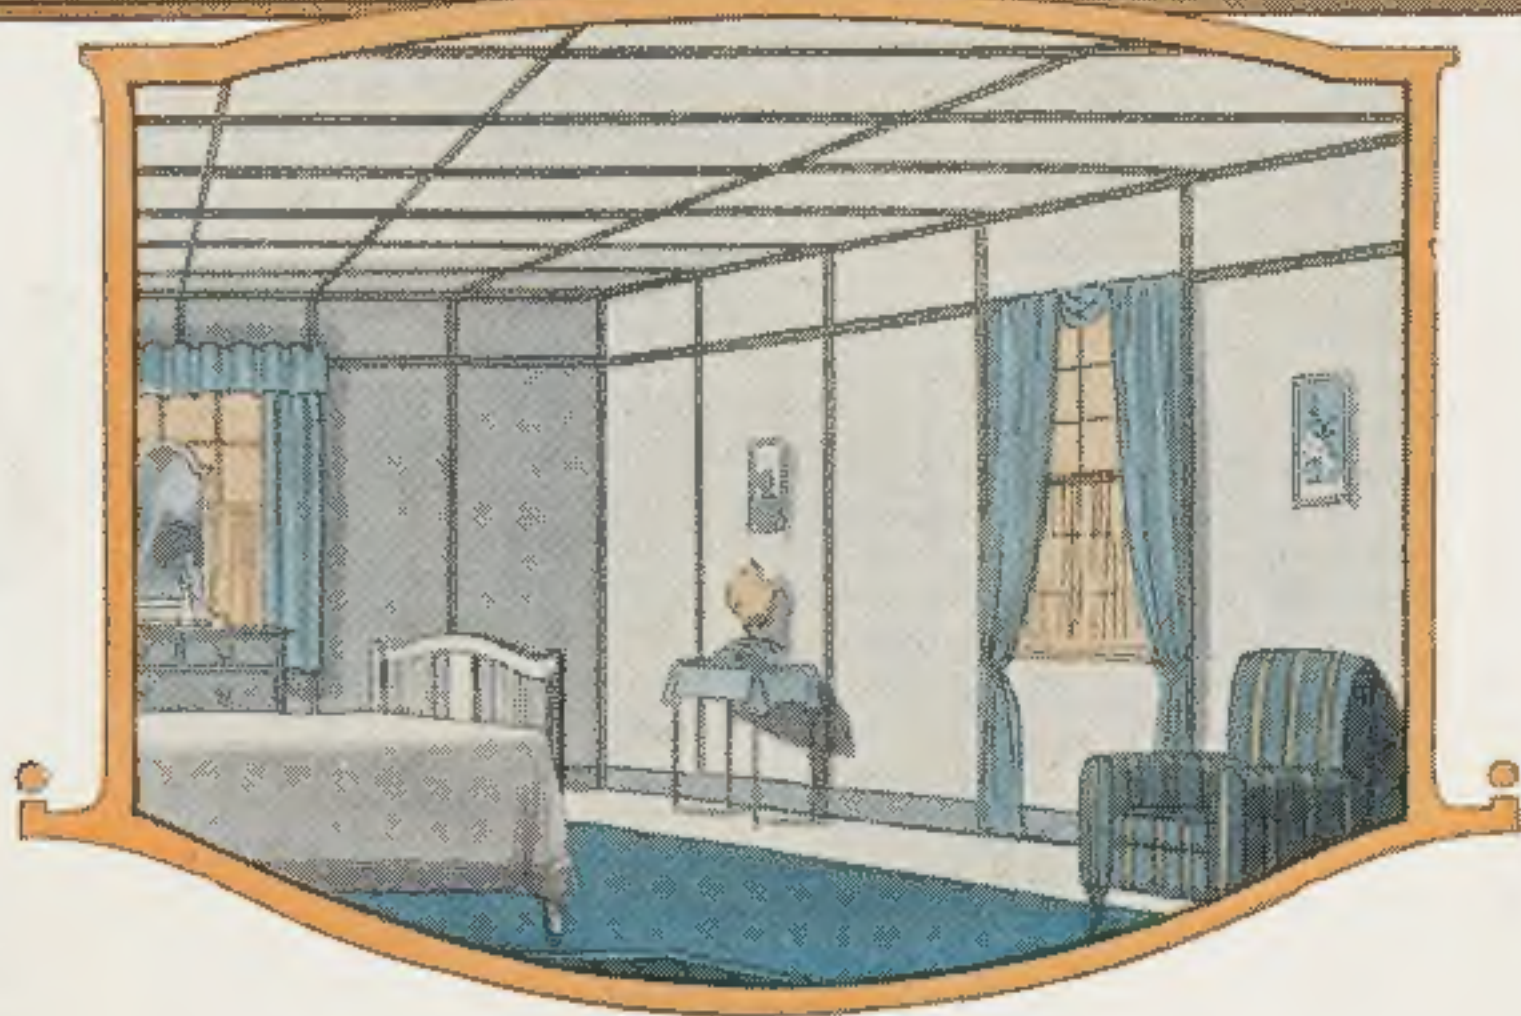

Supplies of Durabestos Sheets are obtainable from leading suppliers of building materials. Samples and free booklet D.4 may be had on request to us.

Simplify Wall Building

The simple charm of this Bedroom, reflecting the refined taste of the builder, is largely the outcome of a Durabestos treatment to Ceilings and Walls.

Walls and Ceilings— Neat, Durable, Inexpensive

INSIDE your Home you can now have strong, durable Walls that will never sag, burn, crumble or rot. You can have Walls with a smooth, clean, agreeable surface resembling the finest trowelled cement.

This you may achieve with ease, and

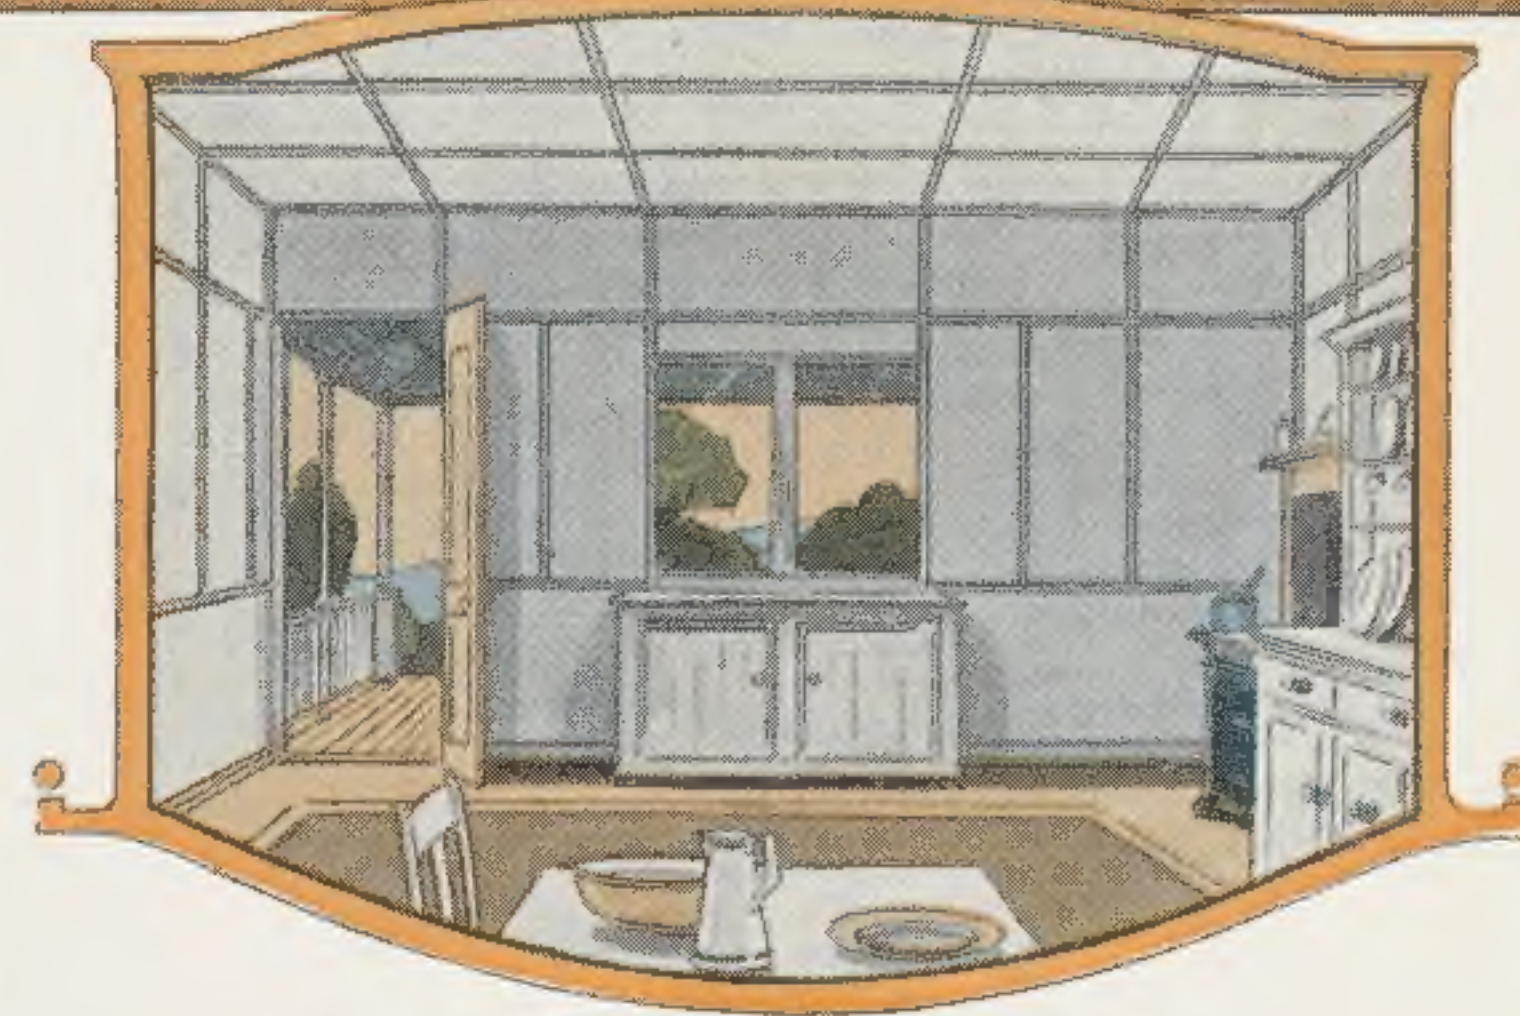

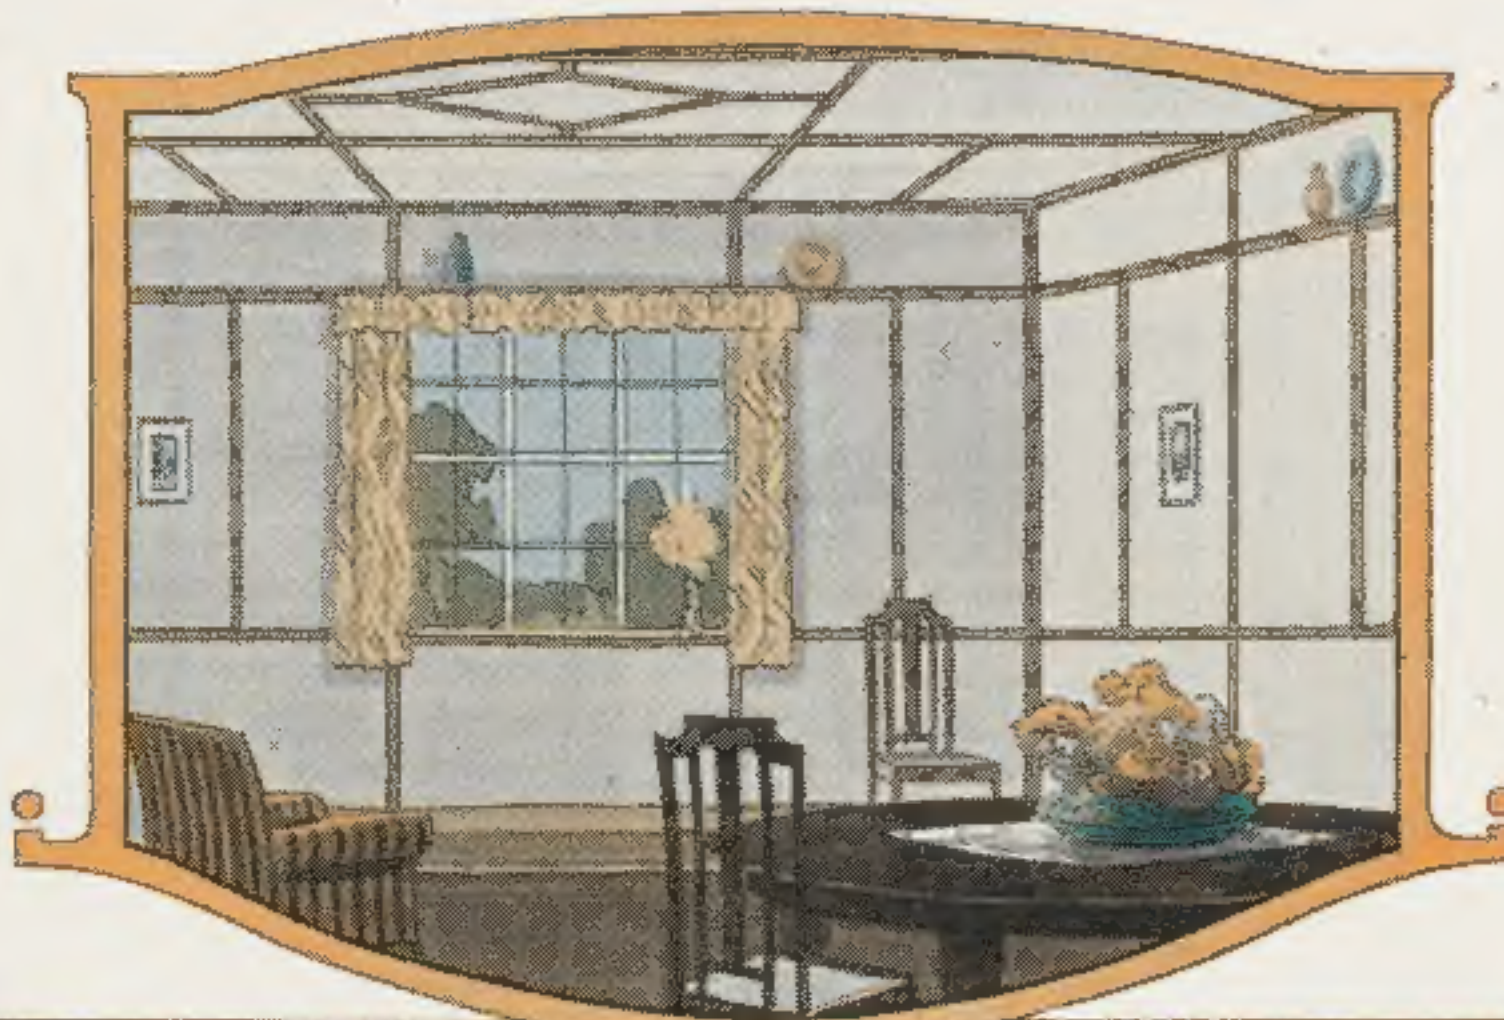

D.9—1/4/26.

at amazingly low cost, by building with Durabestos (asbestos-cement) Sheets.

The work is so very simple. You nail the big, broad Sheets to your Wall studs, then apply cover battens over the joints. In this way you obtain quiet, dignified panelled effects fit to grace any Home Interior.

For Ceilings also, Durabestos Sheets are ideal, if you like plain treatments.

Harmonising Wall and Ceiling effects, achieved by a suitable panelling of Durabestos surfaces, give this Living Room a pleasing, inviting atmosphere.

Walls and Ceilings of Durabestos—clean, smooth and restful—are ideal for the Kitchen. They are not affected by dampness, steam, smoke or dry heat.

Another use for Durabestos is as an Exterior Walling. It never fails to keep out the weather. Always neat and attractive, it enriches the Home—makes it more comfortable and lasting.

Supplies of Durabestos are obtainable from leading Storekeepers and Timber-merchants.
